

Part #: **B7380-Split-F3L**

The B7000 Series is available as a one-piece UDC or in a split configuration that allows easy access to interior components as well as height adjustability in the field. It comes standard equipped with an electrical offset frame so no need for conduit penetrations. The upper frame is removable, allowing for future dispenser upgrades without the need for conversion frames.

The B7000 Series is constructed from fuel compatible resin that doesn't require gel coat for corrosion resistance. This greatly reduces the labor needed to install rigid FRP entry fittings.

SIZES

24" Wide at Base

MATERIAL

Fiberglass

Epoxy coated galvanized steel

Quality FRP material won't deform like polyethylene

SPECIFICATIONS:

- 30-year corrosion warranty
- Quality FRP construction
- Available in split or one piece
- Split version is height adjustable in the field
- Interchangeable upper frame for future dispenser upgrades
- Easy slurry pour joint at center on split models
- Fuel compatible resin doesn't require gel coat
- Kit includes installation accessories and slurry
- Sized and tailored to any dispenser model
