

Part #: 9380-F3L-BD-AB

The B8000 and B9000 Series Doublewall VPH UDCs are available in models for almost all existing dispensers. They feature an electrical offset frame to eliminate the need for conduit penetrations. All B8000 and B9000 Series Doublewall VPH UDC's come standard with an interchangeable upper frame for future dispenser upgrades without the need for breaking concrete or a conversion frame.

The B8000 and B9000 Series Doublewall VPH UDCs are manufactured from fuel compatible resin that doesn't require get coat for corrosion resistance, greatly reducing the labor to install rigid FRP entry fittings. All metal work is galvanized and epoxy coated for superior corrosion resistance. This series ships under a continuous 20" Hg vacuum test.

### SIZES

B8000 - 20" Wide at Base

B9000 - 29" Wide at Base

### MATERIAL

Tank-spec doublewall fiberglass

Epoxy coated galvanized steel

*Doublewall construction allows for constant monitoring.*

### SPECIFICATIONS:

- 30-year corrosion warranty
- Quality FRP construction
- Interstice can be monitored hydrostatically or with vacuum
- Interchangeable dispenser frame
- AB2481 compliant in California
- Pre-plumb options available
- Available for most common retail and commercial dispensers
